DRYVIT TO SHOWCASE TAFS™ AT 2007 IBS

Textured Acrylic Finishes - a Durable, Attractive Option for Residential Construction over non-EIFS Assemblies

West Warwick, R.I. (Dec. 12, 2006) – Dryvit Systems, Inc., the leading manufacturer of Exterior Insulation and Finish Systems (EIFS), will showcase Dryvit TAFS™ - superior textured acrylic finishes ideal for residential exterior applications – at the 2007 International Builders Show (Booth #S12531), February 7-10, 2007 in Orlando, Fla.

TAFS provide an attractive, lightweight and cost efficient finish option compatible with many commonly used home construction methods. These dirt-resistant, durable exterior finishes can be used over stucco, concrete masonry units, tilt up, and ICF substrates, among others, enabling builders to offer several high-performance finish options to systems that otherwise are limited to paint or other coatings.

“While we believe the full EIF system offers the best performance value for home builders for many reasons, we also recognize that not all builders use EIFS on their homes. Dryvit TAFS allow builders to enhance the aesthetics and value of any home,” said Tony Stall, Vice President of Marketing for Dryvit Systems, Inc.

TAFS provide builders an array of stylish home design options. They are available in custom colors, can be combined with decorative EPS shapes, and can achieve virtually any desired look – whether brick, stucco, limestone, granite or combinations thereof.

TAFS are applied by professional contractors, using a variety of techniques to achieve the final desired appearance. For more information about TAFS, and/or the location of your nearest Dryvit distributor, call 800-556-7752 or visit www.DryvitHomes.com.
